

EYELASH EXTENSIONS

AFTERCARE ADVISE

- Do not rub your eyes
- Clean with a lash foam Cleanser once every 2 days
- Avoid oily products and cleansers over the lashes. (this can dissolve the adhesive)
- Avoid getting them wet for 24hrs
- Use a small brush to brush them into shape. Support them at the base using your finger when brushing your lashes.
- Keep on top of your infills (recommend every 2-3weeks)
- Do not twist or pull at your lashes.

PLEASE NOTE:

After your treatment you may feel some slight sensitivity/redness caused from the vapours of the adhesive. For your safety here at Salon No10 a nano mister is used to cure the adhesive in a 30second mist. The mist is gently held over the eyes ensuring the adhesive is set straight away creating less risk.

If you suffer with any sensitivity then use a cold compress of damp cotton wool on the water line of your eye to help sooth.

Is very unlikely for you to get any irritation but if you have any questions or concerns then please feel free to contact us.
