 - Reduces enlarged pores
 - Helps to reduce dark circles under the eyes
- Fat reduction for under eye bags and double chin

WHAT IS FRACTIONAL MESOTHERAPY?

Fractional Mesotherapy is the ultimate 2 in 1 treatment combining Microneedling and a contemporary Mesotherapy practice.

MICRONEEDLING

Microneedling is a treatment where micro needles penetrate into the top layers of the epidermis to create something called a micro-trauma that triggers new collagen to form. This process is called collagen induction therapy (CIT)

MESOTHERAPY

During the treatment the use of pharmaceutical grade Fusion Meso vitamins, biometric peptides, growth factors and patented smart mix solutions to make every treatment bespoke to gain the ultimate results for your complexion.

CUTTING EDGE TECHNOLOGY...

MESO PEN PLATINUM

Here at Salon N°10 we do a tremendous amount of research prior to taking on any treatment. Clinical trials are very important when promoting result driven treatments like these so we are very proud to introduce the Meso Pen Platinum.

Meso Pen platinum is a treatment that uses cutting edge technology to deliver Fractional Mesotherapy Treatments.

This is much more advanced treatment compared to the traditional method of derma rolling.

With derma rolling it can be a little more invasive dependant on the pressure each therapist uses and does not deliver the precision and comfort that the Meso Pen Platinum does.

Meso Pen Platinum is a CE Certified device and has your safety in mind.

The use of disposable needle or singular needle attachment heads makes it super hygienic. Its a completely safe and a clinical based treatment. The pen glides over the skin creating tiny channels for the Mesotherapy cocktails to deliver you superior results.

Does the treatment hurt?

You may feel some slight discomfort as everyone's pain threshold is slightly different. Majority find there is a slight nipping sensation and

for an hour or so after your treatment your skin may feel quite warm and pink in colour.

The best thing about this treatment is that the down time is very little and the skins healing response is usually between 24-48hrs.
