WHAT IS PLASMA FIBROBLAST?

GIVING REVOLUTIONARY AGE REVERSAL PROCEDURES
WITHOUT PAINFUL OR INVASIVE SURGERY

This is an age reversal, skin tightening, skin lifting, wrinkle, line plumping treatment that can be used to treat a number of areas of the face & body...

Plasma Pen by Louise Walsh is a CE Certifide device that creates a small electrical charge that produces ionised gas that is directed through an ultra fine 0.4 or 0.2mm probe. This is where the energy creates a plasma arch that transfers precisely onto the epidermal layer, creating a precisely controlled micro trauma via thermal conduction.

By producing a micro-trauma it leaves behind tiny micro-crusts that sheds from the skin between approx 5-7 days leaving beautiful, rejuvenated baby skin.

Once the Plasma pen has created the micro-trauma the skin immediately gets to work by sending Fibroblasts to repair the area treated...

The skin.... being the largest organ of the body is amazing at repairing itself and the fibroblasts within the skin not only repair they start to produce new collagen.

As we age collagen depleats leaving our skin less plump and sagging starts to occur....

It's a know fact that our skin losses the collagen strength over time but studies have now proven that by creating small micro-traumas it enables us to top up our collagen levels enabling to reverse the signs of ageing.

Collagen stays healthy and strong for up to 3years+ proving long lasting results and huge benefits for your skin.

Collagen formation:

When collagen is forming it goes through a transitional process and will take up to 12 weeks to be at its optimum strength.

With a treatment like this I always say patience is key.... But the results will be so worth it!

IS PLASMA FIBROBLAST SAFE/IS IT PAINFUL?

This is a non-invasive treatment with minimum pain/discomfort. The treatment procedure will be performed with a clinical based environment without cutting, burning or removing excess fat compared to surgery.

You may feel hot in places and some discomfort but rest assured the treatment is very safe.

Plasma technology has been used world wide for over a decade medically with NO significant or adverse effects.

General Treatment Information/How many treatments do I require?

Depending on different factors (your age, the laxity of the skin, skin response) can determine the amount of treatments required to meet expectations of the desired results.

Some people on require one sitting some maybe two, three or perhaps four.

Here at Salon N°10 we provide a FREE Consultation where we can create a bespoke treatment plan to decide on how to achieve the best results for your skin..

THE IMAGE ABOVE YOU CAN SEE THE EYELID PRIOR TO TREATMENT WHERE THE SKIN HAS LOST ELASTICITY TO THE UPPER LID THE SECOND IMAGE THIS IS STRAIGHT AFTER THE PLASMA PEN TREATMENT.... THE TINY DOTS ARE MICRO-CRUSTS WHICH SHE'D FROM THE SKIN APROX 5-7 DAYS POST TREATMENT. SEE THE IMMEDIATE RESPONSE & HOW TAUGHT THE SKIN HAS BECOME...

AS AN ELITE PLASMA PEN TECHNICIAN I HAVE BEEN TRAINED TO THE HIGHEST STANDARDS IN WHICH TECHNIQUES ARE APPLIED FOR BLEPHAROPLASTY, SUBLIMATION & SOFT SURGERY FIBROBLASTING USING THE LOUISE WALSH PLASMA PEN DEVICE.

POST TREATMENT & AFTERCARE...

After any Plasma fibroblast treatment it's highly important that you take care of your skin. This will ensure that you get the best results.

After the treatment has ended I will go through the aftercare requirements and you will be sent an e-file aftercare leaflet that will give clear instructions to remind you of how to help your skin during the healing process. For all of my clients I like to give 100% when it comes to customer care and I am available at all times if you have any questions.

I always say the treatment doesn't just end after your appointment I am always available to get you the best results but you must take care of your skin and don't let all the good work go to waste.

What to expect after the treatment:

After the plasma treatment you will experience a slight sunburn sensation and over approx three days you may have some swelling. Please be aware that this is a good healing response and in a sense through experience this is what we are looking for as it shows that the skin is responding well. Some clients I find have more swelling than others and it very much depends on the area that is being treated.

The micro-crusts will begin to shed anywhere from 3-7days.

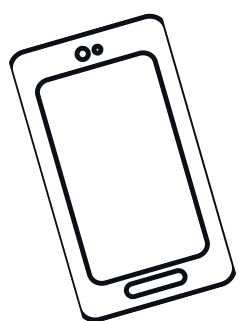

For the full stages of the collagen process to get at its most tensile strength then this can take anywhere upto 12-14 weeks. Please remember patience is key but it will give you long lasting results...

As part of the treatment I always follow up on my clients progress....

Follow up care:

- 6weeks post treatment:I will ask you to pop back into the salon for an initial check up
- 12 weeks post treatment for your final result.

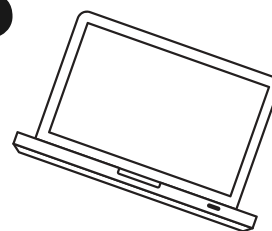

BOOK YOUR FREE CONSULTATION TODAY

CALL: 01283 220406

Book online:

www.salonno10.co.uk

Prices can vary depending on a number of different factors and this will be explained during the consultation once a bespoke plan has been created. We need to take into consideration the clients age, laxity of the skin and the amount of work required to carry out the treatment including the time factor.

Please note: The consultation is a no obligation and free of charge service. If you are wanting to book then a 25% deposit will be required.

Cancelling an appointment: as it is an advanced procedure I kindly ask a minimum of 7days to rearrange
And 14days to cancel this allows me time to allocate more bookings to fill the appointment space.
